The invention relates to nucleic acid molecules comprising altered HCV NS3 or HCV NS5 encoding region, or encephalomyocarditis virus (BMCV) internal ribosome entry site (IRES) region coding for one or more NS3, NS5A, or EMCV IRES mutations, respectively. The location of the mutations are detailed in the specification. Also included are (1) an expression vector comprising a nucleotide sequence coding for the altered nucleic acids, which is transcriptionally coupled to an exogenous promoter; (2) a recombinant cell human hepatoma cell comprising the altered nucleic acids; (3) a recombinant cell produced by introducing into a human hepatoma cell the altered nucleic acids; (3) a recombinant cell produced by introducing into a human hepatoma cell the altered nucleic acids; (4) producing an HCV (hepatitis C virus) replicon enhanced cells made in the method; and (6) measuring the ability of a compound to affect HCV activity. The HCV replicons and HCV replicon and host cells are useful in studying HCV replication and expression, and HCV and host cell interactions, producing HCV RNA and to modulate one or more HCV activities e.g. to discover drugs which may then the research is an HCV replican Con 1 the activity mediated diseases such as liver failure, cirrhosis and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Query Match

The present sequence is an HCV replicon Con 1 mutant of the invention. Note: The present sequence is not shown in the specification but was created by the indexer using the HCV sequence appearing as ABK91411 and the information in Claim 9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Sequence 9605

                                                                                           Ş
                                                                                                                                                                                                                   CC NS3 or HCV NS5 encoding region, or encephalomyocarditis virus (EMCCY)

CC internal ribosome entry site (IRES) region coding for one or more NS3,

CC NS5A, or EMCV IRES mutations, respectively. The location of the mutations

CC are detailed in the specification. Also included are (1) an expression

CC acids, which is transcriptionally coupled to an exogenous promoter; (2) a

CC cacids, which is transcriptionally coupled to an exogenous promoter; (2) a

CC recombinant cell human hepatoma cell comprising the altered nucleic acids

CC; (3) a recombinant cell produced by introducing into a human hepatoma

CC cell the altered nucleic acids; (4) producing an HCV (hepatitis C virus)

CC replicon enhanced cells made in the method; and (6) measuring the

CC ability of a compound to affect HCV activity. The HCV replicons and HCV

CC replicon enhanced cells are useful in studying HCV replication and

CC contains, and HCV and host cell interactions, producing HCV RNA and

CC proteins, and providing a system for measuring the ability of a compound

CC treat HCV mediated diseases such as liver failure, cirrhosts and

CC hepatocellular carcinoma. The present sequence is the HCV replicon Con 1,

CC used as a basis for the adaptive mutations of the invention

The invention relates to nucleic acid molecules comprising altered HCV CC NS3 or HCV NS5 encoding region, or encephalomyocarditis virus (EMCV) CC NS5A, or EMCV IRES mutations, respectively. The location of the mutations CC are detailed in the specification. Also included are (1) an expression CC vector comprising a nucleotide sequence coding for one appression CC caids, which is transcriptionally coupled to an exogenous promoter; (2) a recombinant cell human hepatoma cell comprising the altered nucleic acids (2); (3) a recombinant cell produced by introducing into a human hepatoma CC replicon enhanced cell or which containing a functional HCV replicon; (5) a replicon enhanced cells made in the method; and (6) measuring the cability of a compound to affect HCV activity. The HCV replicons and HCV replicon enhanced cells are useful in studying HCV replication and compound to most cell interactions, producing HCV RNA and correspond and HCV and host cell interactions, producing HCV RNA and correspond to modulate one or more HCV activities e.g. to discover drugs which may treat HCV mediated diseases such as liver failure, cirrhosis and hepatocellular carcinoma. The present sequence is not shown in the compound to the invention. Note: The present sequence is not shown in the compound to the invention. Note: The present sequence is not shown in the compound to the invention. Note: The present sequence is not shown in the compound to the invention. Note: The present sequence is not shown in the compound to the invention. Note: The present sequence is not shown in the compound to the invention.

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

US-09-539-601-10
; Sequence 10, Application US/09539601C
; Patent NO. 6630343
; GENERAL INFORMATION:
; APPLICANT: Battenschlager, Ralf FW
TITLE OF INVENTION: Hepatitis C Virus Cell Culture System
; FILE REFERENCE: all sequences
; CURRENT FILING DATE: 2001-08-30
; EARLIER APPLICATION NUMBER: US/09/539,601C
; CURRENT FILING DATE: 1999-04-03
; EARLIER FILING DATE: 1999-04-03
; NUMBER OF SEQ ID NOS: 51
; SOCITANDE: Patentin Ver. 2.1
; SEQ ID NO 10
; LENGTH: 7989
; TYPE: DNA
ORGANISM: Hepatitis C virus
; PANURE: 5'UTR
; NAME/KEY: 5'UTR
; LOCATION: (1)..(341)
OTHER INFORMATION: construct 1377/NS3-3'/wt
; FEATURE:
; NAME/KEY: CDS
; LOCATION: (342)..(1181)
; OTHER INFORMATION: hepatitis C virus core-neomycin phosphotransferase
; OTHER INFORMATION: fusion protein
; FEATURE:
```

Sequence 4, Application US/10029907
; Patent No. 6706874
; GENERAL INFORMATION:
APPLICANT: BOCHRINGER INGELHEIM (CANADA) LTD
TITLE OF INVENTION: SELF REPLICATING RNA MOL
TITLE OF INVENTION: HEPATITIS C VIRUS
FILE REFERENCE: 13/083
; CURRENT APPLICATION NUMBER: US/10/029,907
; CURRENT APPLICATION NUMBER: 60/257,857
PRIOR APPLICATION NUMBER: 60/257,857
PRIOR FILING DATE: 2000-12-22
; NUMBER OF SEQ ID NOS: 25
; SOFTWARE: FastSEQ for Windows Version 4.0
; SEQ ID NO 4
; SEQ ID NO 4
; LENGTH: 8643
; TYPE: DNA
; ORGANISM: HCV
FEATURE:
NAME/KEY: CDS
; LOCATION: (1802)...(8407)

RESULT 15
US-09-539-601-22
; Sequence 22, Application US/09539601C
; Patent No. 6630343
; GENERAL INFORMATION:
APPLICANT: Bartenschlager, Ralf FW
APPLICANT: Bartenschlager, Ralf FW
TITLE OF INVENTION: Hepatitis C Virus Cell Culture System
FILE REFERENCE: all sequences
; CURRENT APPLICATION NUMBER: US/09/539,601C
; CURRENT FILING DATE: 2001-08-30
EARLIER APPLICATION NUMBER: 199 15 178.4 GERMANY
EARLIER APPLICATION NUMBER: 199-04-03
; NUMBER OF SEQ ID NOS: 51
; SOFTWARE: Patentin Ver. 2.1
; SEQ ID NO 22
; LENGTH: 8001
; TYPE: DNA
; CRGANISM: Hepatitis C virus
FEATURE:
 NAME/KEY: 5'UTR
; LOCATION: (1)..(341)

         Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Score

Astron	The BDGP is constructing a physical map of the Drosophila melanogaster genome using these BACs. For further informat please see http://www.fruitfly.org The BDGP Drosophila melanogaster BAC library was prepared by Kazutoyo Osoegaw Aaron Mammoser in Pieter de Jong's laboratory in the Depar Cancer Genetics at the Roswell Park Cancer Institute in BLY. The library is named RPCI-98 and was constructed by per EcoRI digestion of Drosophila DNA provided by the BDGP frosophila on the plant of the provided by the BDGP frosophila bac services by the BDGP frosophila bac lones, the entire library and how to order individual BAC clones, the entire library filters for hybridization from the BACPAC Resource Center found at http://bacpac.med.buffalo.edu/drosophila_bac.htm.location/Qualifiers Josephism="Drosophila melanogaster"	ope.cns.fr) his BAC-end sequence was carried out	ALOS3013 ALOS3013.1 GI:493446 GSS. Drosophila melanogast Eukaryota; Metazoa; A Neoptera; Endopterygo Ephydroidea; Drosophil 1 (bases 1 to 925) Genoscope.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              source
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Web: www.genoscope.cns.fr)

Determination of this BAC-end sequence was carried out as part of a collaboration with the Berkeley Drosophila Genome Project (BDGP). The BDGP is constructing a physical map of the Drosophila melanogaster genome using these BACs. For further information please see http://www.fruitfly.org The BDGP Drosophila melanogaster BAC library was prepared by Kazutoyo Osoegawa and Aaron Mammoser in Pieter de Jong's laboratory in the Department of Cancer Genetics at the Roswell Park Cancer Institute in Buffalo, NY. The library is named RPCI-98 and was constructed by partial EcoRI digestion of Drosophila DNA provided by the BDGP from the isogenic strain y2; cn bw sp, the same strain used for the BDGP's P1 and EST libraries. A more detailed description of the library and how to order individual BAC clones, the entire library, or filters for hybridization from the BACPAC Resource Center can be location/Qualifiers

Determination of this BAC-end sequence was carried out as part of a collaboration with the European Drosophila Genome Project (EDGP) - http://www.edgp.ebi.ac.uk - This Drosophila melanogaster BAC http://www.edgp.ebi.ac.uk - This Drosophila melanogaster BAC library (Dros BAC) was made by Alain Billaud at CEPH (Centre d'Etude du Polymorphisme Humain) with funding provided by a NRC project grant. The DNA was prepared from embryos by Alain Bucheton
